CLAIMS: The following is a listing of all claims in the application with their status and the text of all active claims:

1. (CANCELLED)
2. (CANCELLED)
3. (CANCELLED)
4. (CANCELLED)
5. (CANCELLED)
6. (NEW) The product/invention is a weighted swaddling blanket comprising:

a blanket web forming top and bottom layers of flexible material that sandwiches a baby in between said layers while said layers secures together at opposite ends by fastening means;

a plurality of compartment assemblies secures to said top layer thereby anchoring said top layer on top of said baby, each of said compartment assemblies comprising;

a pocket having an opening only at one end extending across said pocket;

an interior pouch for receiving pellet material tightly sealed secured inside of said pocket;

whereby said baby is positioned in such a way as to be sandwiched between said top and bottom layers of said blanket web, said compartment assemblies of said top layer hold and swaddle said baby in place providing a sense of security and comfort and allowing said baby to sleep comfortably, a holding and swaddling effect provides said baby a simulation of secure feeling inside a womb.

7. (NEW) The weighted swaddling blanket of claim 2 wherein the compartment assemblies further comprises said fastening means between the openings of said pocket securing said interior pouch.

Appn. Number 10/710,615 (Roda) GAU 3673 Amnt. C Contd. 7 of 8

8. (NEW) A weighted swaddling blanket comprising:

a top sheet of flexible material capable of positioning on top of a baby;

a bottom sheet of flexible material capable of positioning on a surface;

a plurality of compartment assemblies secured to said top sheet positioned on top of said baby, each of said compartment assemblies comprising;

a pocket having an opening only at one end extending across said pocket, said opening has fastening means securing contents of said pocket;

an interior pouch for receiving pellet material tightly sealed secured inside of said pocket;

whereby said baby is positioned and sandwiched between said top and bottom sheet, said compartment assemblies of said top sheet holding and swaddling said baby in place providing a sense of security and comfort feeling inside a womb and allowing said baby to sleep comfortably.

9. (NEW) The weighted swaddling blanket of claim 4 wherein said top and bottom sheets are coupled together at opposite ends by fastening means.
